RE: (SCH) Corralitos Creek Apartments #440.002

Dear Michael,

I want to thank you, Tom, Bill and the entire company for an outstanding job of design and installation of the geo-pier system.

As you are aware, the geo-pier system saved us over one (1) month on our schedule and the Owner only had to provide a soils engineer for seven (7) days instead of a special inspector and a soils engineer for over six (6) weeks to observe the concrete pier and grade beam design of the original foundation.

This system is one I would recommend to anyone who is value-engineering a foundation in unsuitable soil conditions and the following are some reasons why:

1. The system is 500% faster than any other foundation system we have researched.
2. The speed in which a pier can be drilled and filled with compacted material is such that cave-ins to the piers are eliminated.
3. The cost savings to the project overall in time and money benefited both the us and the Owner.

It was refreshing to work with someone who's actions spoke louder than his words. You kept every one of your promises and with minimal impact to the job site.

Respectfully,

John Curro
Vice President/Project Manager
