Subject: Intervening Wall Repair and Retrofit
Monterosso Court, Danville, CA

Dear Tom,

Lennar would like to thank you and Farrell's crews for the great job engineering and installing the H-pile buttress beams for the Intervening wall project in Danville. Farrell's engineering service and complete design submittal made it thru our peer review and Geotechnical Engineer of Record with minimal comments.

Farrell's construction crew at our site was very professional and easy to work with. I would hope that we can work with your firm in the future, since all I had to do was meet once every other day with them and I could count on issues being handled in a timely and professional manner. James and the rest of the Farrell crew performed their duties with care, precision, and professionalism. They maintained a safe working environment and coordinated well with Lennar to deliver the H pile buttress beams along the wall slope.

In the end, the concrete formed H-piles look great and will satisfy the project needs since the formed concrete captured more of the wall than originally planned. You guys completed the project without one neighbor complaint in this million dollar home neighborhood... Awesome! Overall, this really made my job easy.

Because of the project's success and Farrell's excellent customer service, we will be looking for future opportunities using your design-build services and will recommend Farrell Design-Build as a foundation and wall solution provider on our projects.

We look forward to working with the Farrell team on future projects!

Sincerely,

Mike Pennisi
